

i) Check Positive Number.

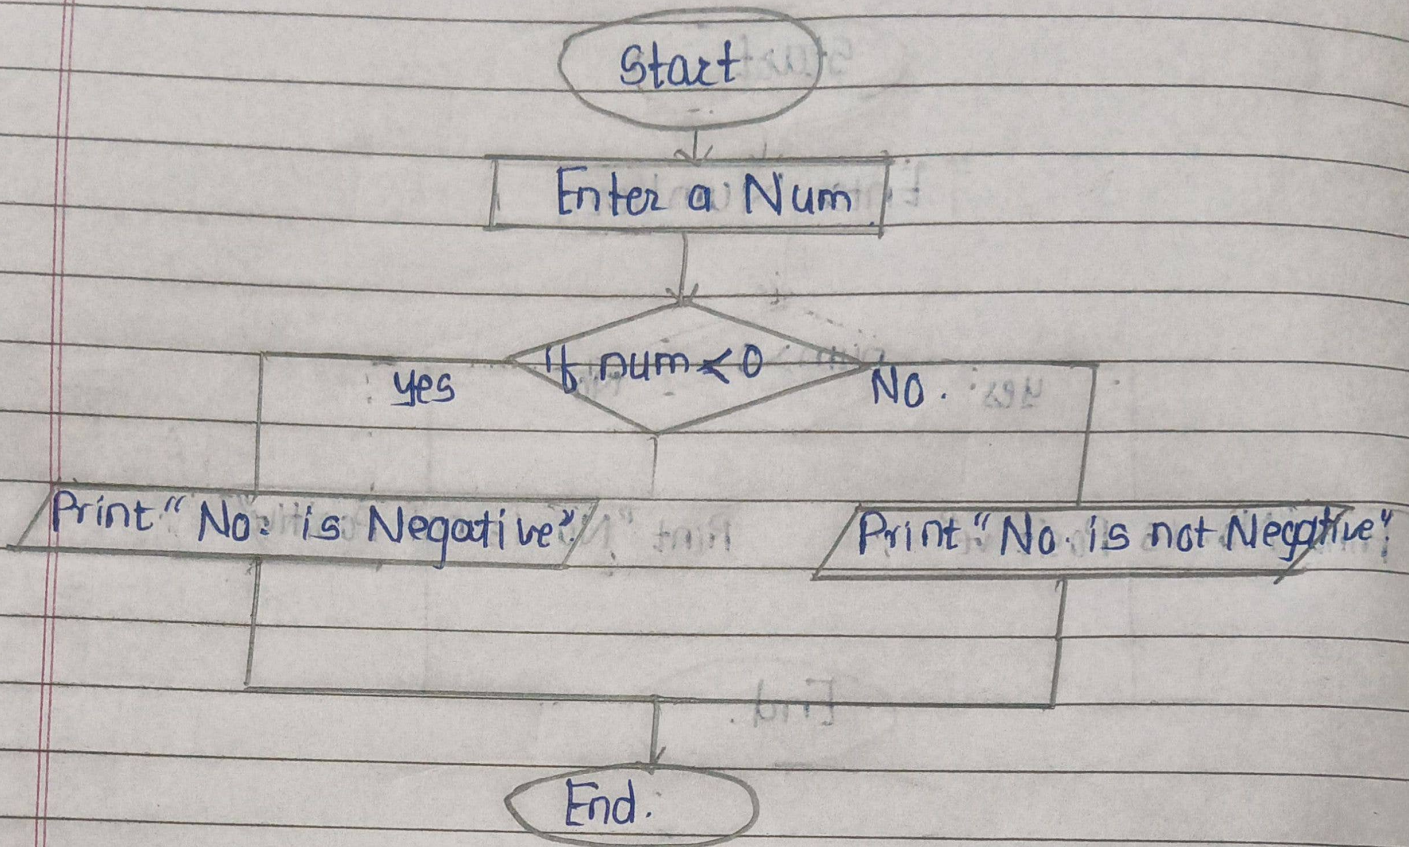

Program -

```

class PositiveNum {
    public static void main (String [] args) {
        System.out.println ("Enter number:");
        int num = 5;

        if (num > 0)
        {
            System.out.println ("No is positive");
        } else
        {
            System.out.println ("No is not positive");
        }
    }
}
  
```

2] Negative Number -

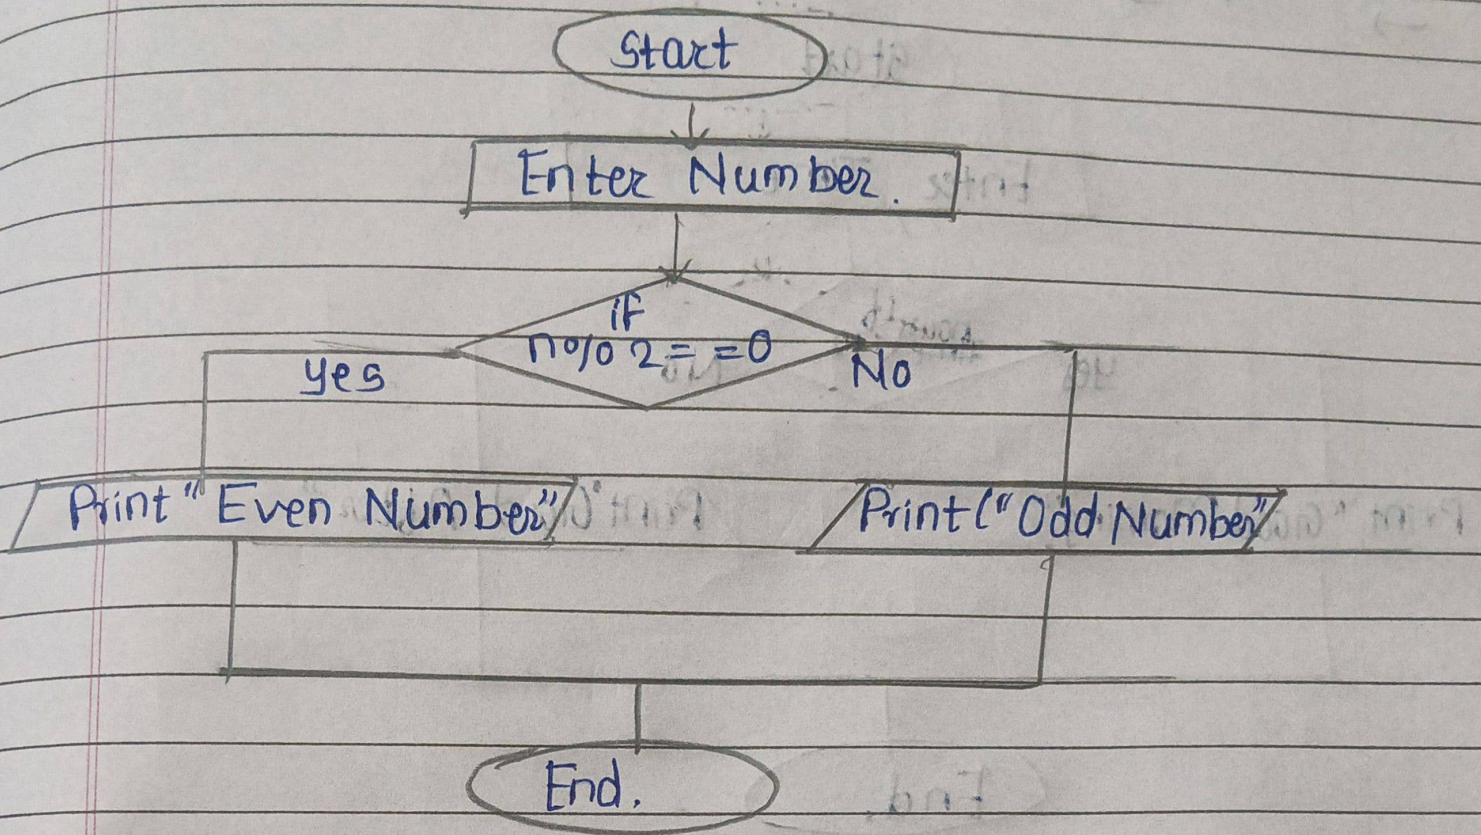

Program -

```
class NegativeNum {  
    public static void main (String[] args)  
    {  
        System.out.println ("Enter a number");  
        int num = -3;
```

```
        if ( num < 0 ) {  
            System.out.println ("Number is Negative");  
        } else  
        {  
            System.out.println ("Number is not Negative");  
        }  
    }  
}
```

$$n \% 2 == 0$$

3] Check Odd or Even Number

Program -

```
class EvenOdd
```

```
{
```

```
public static void main (String[] args)
```

```
{
```

```
System.out.println ("Enter a number");
```

```
int int num = 3
```

```
if (num % 2 == 0)
```

```
System.out.println ("Even Number");
```

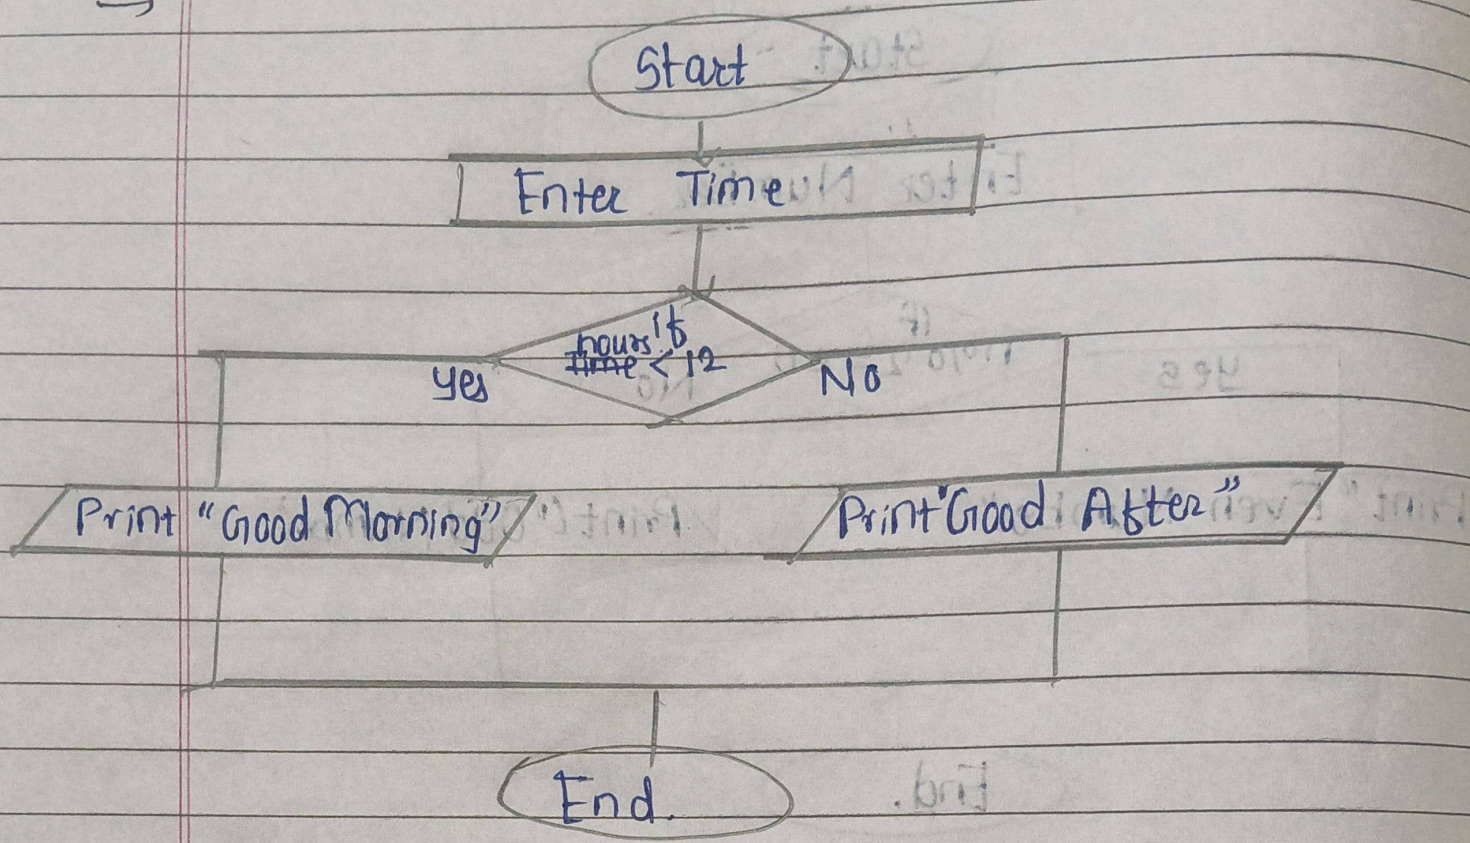

```
else
```

```
System.out.println ("Odd Number");
```

```
}
```

```
},
```

4) Display "Good Morning" Message based on time.

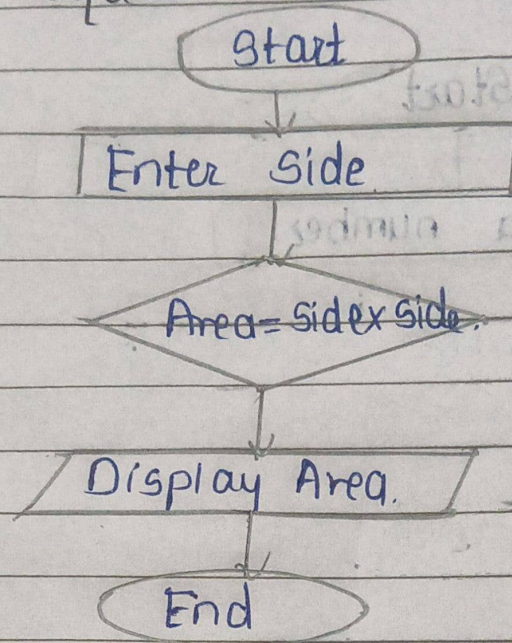

Program-

```

class Time {
    public static void main (String[] args) {
        int hours;
        int time = 9;
        if (hours < 12) {
            System.out.println ("Good Morning");
        } else {
            System.out.println ("Good Afternoon");
        }
    }
}
  
```

Formula-

5] Area of Square - $\text{Area} = \text{side} \times \text{side}$ 

Program -

```
class Square
{
```

```
    public static void main (String[] args)
    {
```

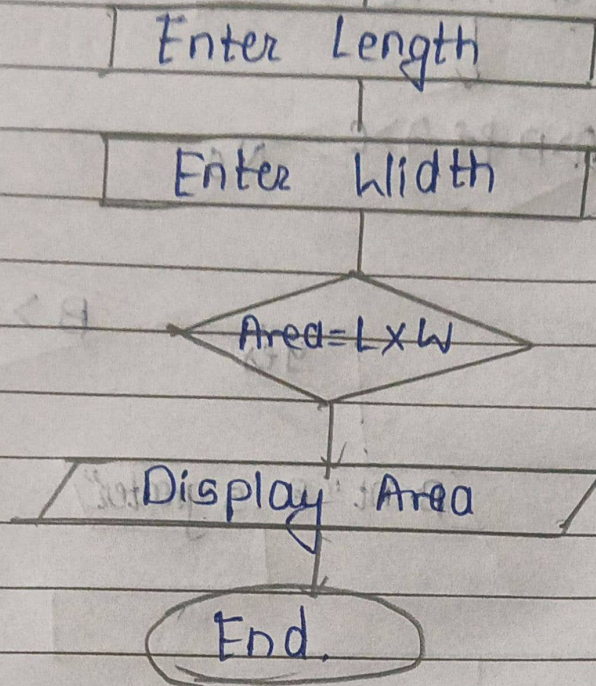

```
        int side = 3;
```

```
        int area = side * side;
```

```
        System.out.println ("Area of Square = " area);
    }
}
```

6] Print Area of Rectangle -

Formula- Area of Rectangle = length * ^{width} breadth
Start

Program .

```
class Rectangle
```

```
{  
    public static void main(String[] args)
```

```
{  
        int length = 3;
```

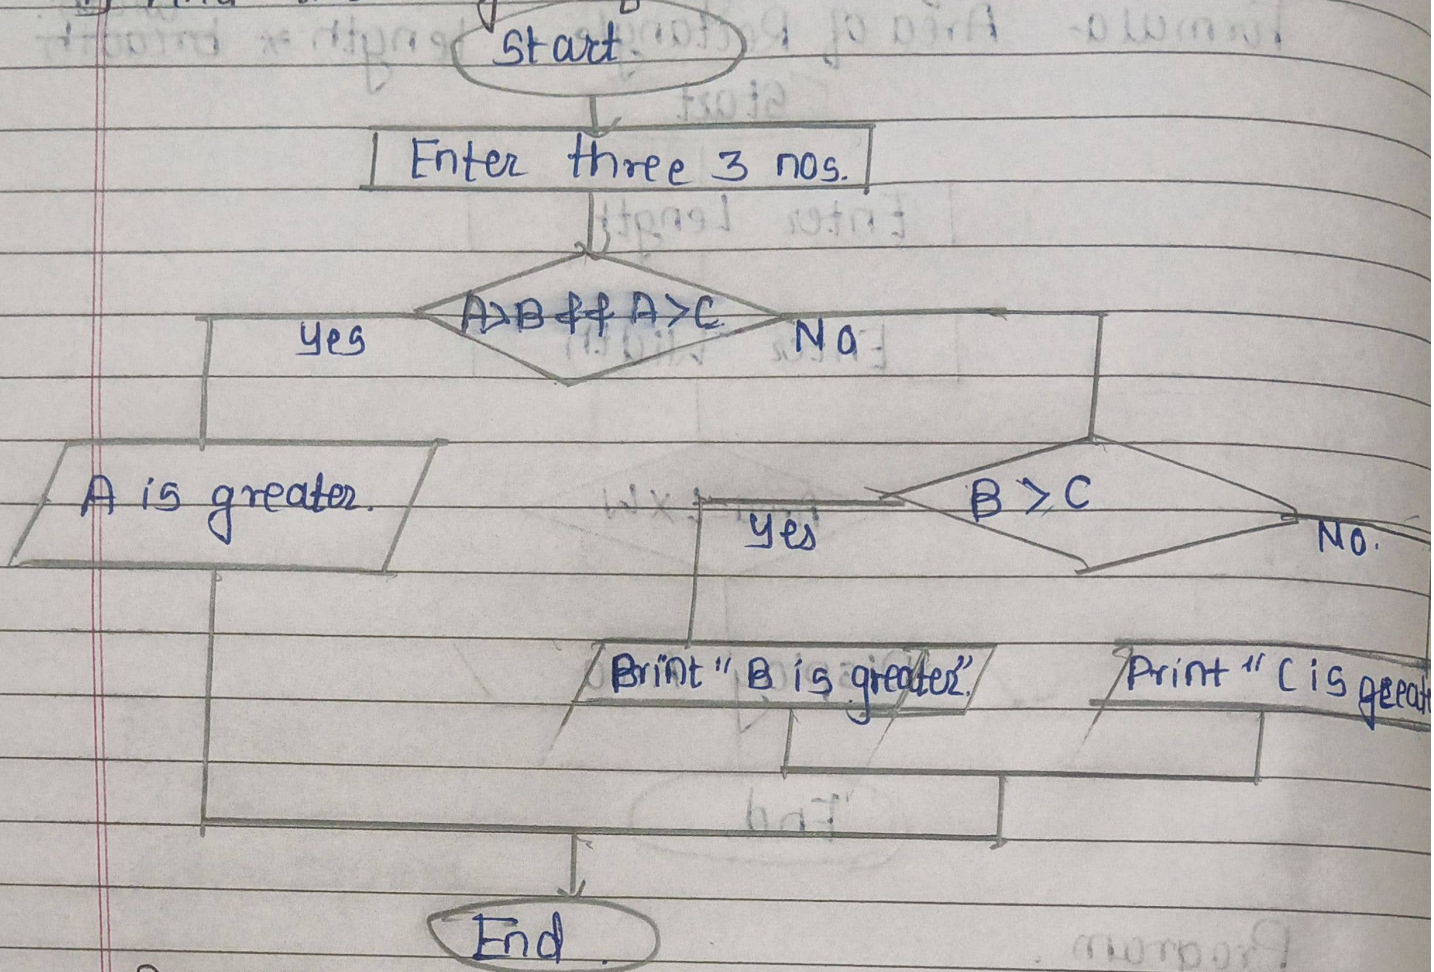

```
        int width = 5;
```

```
        int area = length * width;
```

```
        System.out.println("Area of Rectangle" = area);  
    }
```

```
}
```

7] Find the Largest of Three Numbers -

Program -

```

class LargeNum {
    public static void main (String[] args)
    {
  
```

```

        int a = 3;
  
```

```

        int b = 15;
  
```

```

        int c = 10;
  
```

```

        if (a > b && a > c)
  
```

```

        System.out.println("A is greater");
  
```

```

        else if (b > c)
  
```

```

        System.out.println("B is greater");
  
```

```

        else
  
```

```

        System.out.println("C is greater");
  
```

```

    }
  }

```
